

You are an egg that lands in a soft sandy spot and hatches into a larva. You enjoy a few days of floating around, but eventually another fish swims along and eats you.

You are an egg that settles into a soft sandy spot of the ocean, protected from most predators. You hatch into a fry, stay away from larger fish and fishing nets, and eventually grow into an adult. You spend your days swimming around, catching food, and hanging with other fish. Congratulations, you made it!

Back

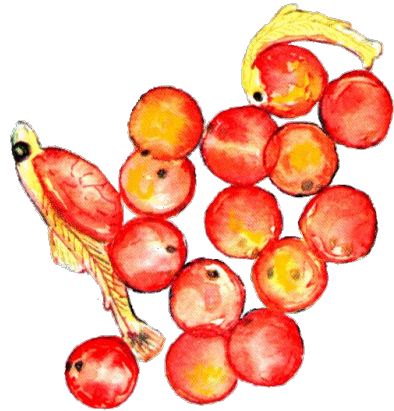

You are an egg that settles into a soft spot, hatches into a larva, and eventually grows to become a fry. You become skilled at swimming quickly and eating small plankton, but unfortunately a larger fish comes along, catches you, and eats you.

You are an egg that floats around peacefully before landing on a soft bed of sand. A day later a lobster shows up and eats you.

FAVORITE FISH

Back

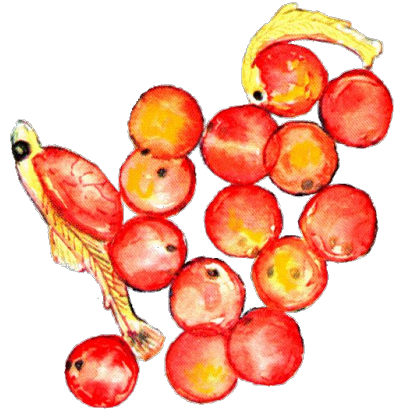

You are an egg that drifts down into the deep ocean, where it becomes too cold to hatch.

You are an egg that gets caught in a strong current. You never break free of the current, so you never find a place to settle. You don't hatch.

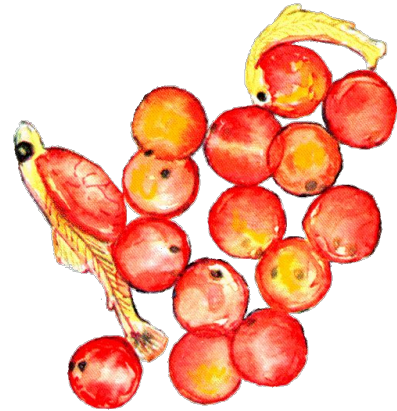

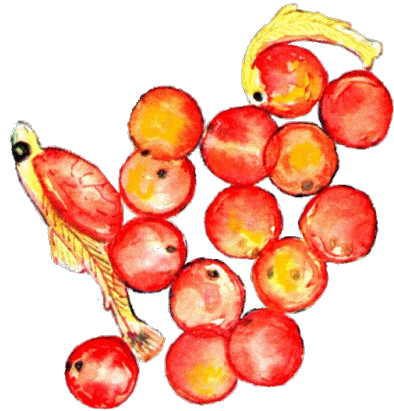

Back

You are an egg that gets harvested with thousands of your other brood mates. You end up on a cracker in a fancy restaurant.

You are an egg that hatches and grows into a fry. You try out your young fins and swim right into a large incoming fish. You taste delicious.

Back

You are an egg that drifts down into the mouth of a waiting fish.

Yum!

FARM SCHOOL

SINCE 2007

You are an egg that hatches and turns into a larva. You drift into a shallow part of the shore, where a crab grabs and eats you.

SINCE 2007

Back

You are an egg that hatches and grows into a fry. One day you are swimming along the bottom of the ocean, when a crab pops up from under some sand and eats you.

You are one egg in a clutch of thousands that somehow didn't get fertilized. You never hatch.

Back

You are an egg that hatches and grows into a fry. One day you get caught in a tide pool too close to shore. A gull spots you from above, and swoops down to eat you.

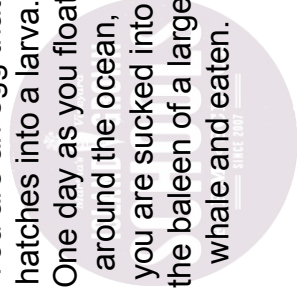

You are an egg that for some reason never hatches.

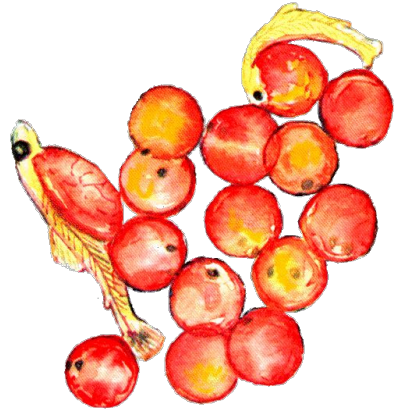

Back

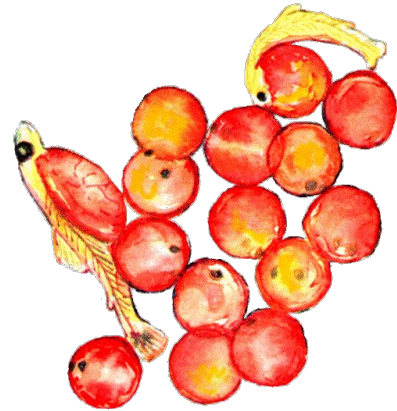

You are one of hundreds of eggs laid in a coral reef. One day a barracuda arrives, and even though your parents try to defend you, the barracuda eats almost all of the eggs, including you.

You are an egg that hatches into a larva. One day as you float around the ocean, you are sucked into the baleen of a large whale and eaten.

You are an egg that
grows into a small fry,
but then are eaten by
a larger fish of your
species: Rude!

Back

You are an egg
that hatches and
grows into a
large fry. One
day you get
tangled in some
fishing net and
are dragged on
board a ship.

You are an egg that
hatches and grows
into a larva, but you
are eaten by a whale.

Back

You are an egg that
hatches, but are
quickly eaten by a
sardine..

You are an egg that
never hatches.
